

Anthony J. Barrows

358 North St. | Burlington, VT 05401 | ajbarrows@gmail.com

To Whom it May Concern,

Please accept my application for the Marketing Analyst position. I have held multiple research positions at the Vermont Center on Behavior and Health, fulfilling different roles as organizational needs arise. By drawing on my technical education, leadership in grant-funded trials, and my commitment to perpetual improvement and innovation, I am confident that I will be a valuable resource to Burton.

My education in social science has taught me the importance of distilling complex ideas into a succinct, accurate, and logical product. I strongly believe that clear writing represents clear thinking, a principle that lends itself to clean code, and the careful pursuit of ends. While implementing an NIH/FDA-initiated clinical trial, I applied this principle by practicing and teaching careful attention to detail, and sensitivity to participants with serious psychiatric conditions like depression, anxiety, and substance use disorders. As a team lead, I provided my colleagues with consistent guidance toward protocol adherence, solutions to complicated problems, and respect for a diversity of opinions and perspectives.

Since completing a Master's in Complex Systems and Data Science at UVM, I now lead many of the Center's technical operations. Most notably, I have raised the Center's standards for efficiency, ease-of-use, and transparency by building fully automated pipelines and dashboards and eliminating time-consuming manual reports. The consistent web-based analysis I produced became critical as we transitioned to fully remote clinical trials, allowing us to measure instantaneous effects and quickly identify challenges. We now have effective, centralized data resources used productively throughout a team distributed along the East Coast.

My approach to data science is defined by the post-disciplinary methods taught in complex systems, where research data analysis helps write narratives about underlying mechanisms, inviting generalized conclusions and more informed questions. I implement this story-telling model throughout my work, from developing better data structures to preparing in-lab reports and publishable manuscripts.

My technical skills honed through experience and graduate education, combined with practice converting difficult concepts into plain English developed through over five years in clinical research make me an excellent candidate to help Burton reach its goals. As a lifelong Vermonter and passionate skier, I am thrilled for the opportunity to perform this work in Burlington. I look forward to discussing my qualifications, commitment to learning new skills and perspectives, and keen interest in adapting to a new, decentralized world in more detail with you. Thank you for your time and consideration.

Sincerely,

Anthony J. Barrows
